

**INDEPENDENT SAFETY
APPROVAL AND ASSURANCE**
*Multiplier's Intrinsically Safe
Batteries are FM Approved
and will maintain FM approval
on your radio system*

- ✓ Multiplier's Intrinsically Safe (I/S) batteries are approved by Factory Mutual for Intrinsically Safe and Non-Incendive operations
- ✓ Multiplier I/S batteries are clearly labeled with required FM Approval ratings
- ✓ Multiplier I/S batteries will NOT void the FM Approval on your radio system
- ✓ We do NOT self-certify...we are certified and approved by the same agency as the OEM

Why is this so important?

The initial approval given to the OEM by Factory Mutual (FM) or other accredited certifying agencies is based on the radio, antenna, and battery as one electrical circuit system. The use of a non-approved alternate product (antenna, battery or other associated apparatus) voids the original approval for Intrinsically Safe rating, as obtained by the original equipment manufacturer for the radio system.

Self-certification, not by an outside accredited agency, but by an alternate manufacturer also voids the Intrinsically Safe rating as obtained by the Original Equipment Manufacturer and could put users at risk.

PERFORM SAFELY IN HAZARDOUS LOCATIONS...

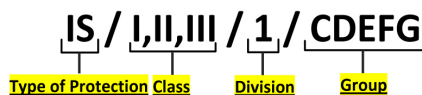

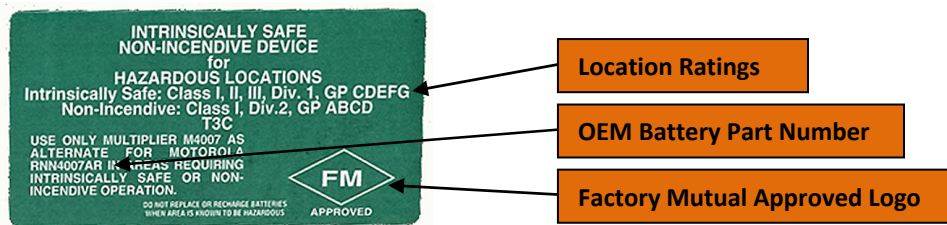

Multiplier's Intrinsically Safe (I/S) batteries are designed to protect against sparking which could ignite flammable gasses or materials and trigger a flash fire. The most common users are government agencies, fire departments, oil refineries, mining, natural gas companies or any industry that uses an intrinsically safe radio and battery in an area that omits volatile gases or flammable airborne dust.

All Multiplier I/S batteries are approved by the Factory Mutual Corporation (FM) and are identifiable by a **Green** FM approved label affixed to the battery that includes the classification rating and the OEM battery part number. (On Motorola models, a small **Green** dot is affixed on the battery housing.)

Are you receiving the required protection from your battery for its use in hazardous locations?

- Look for certification label on product
- Request a certificate of compliance given by FM or other approved outside accredited agency. This will have all the information needed regarding the I/S approval agency and ratings.

**Multiplier FM Approved
CERTIFICATION LABEL**

- OEM Quality
- Widest Product Range
- Field Reliability
- Superior Service & Technical Support
